MIC2940A/41A

1.25A Low Dropout Voltage Regulator

Features

- High Output Voltage Accuracy
- Guaranteed 1.25A Output
- Low Quiescent Current
- Low Dropout Voltage
- Extremely Tight Load and Line Regulation
- Very Low Temperature Coefficient
- Current and Thermal Limiting
- Input Can Withstand –20V Reverse Battery and +60V Positive Transients
- Logic-Controlled Electronic Shutdown
- Output Programmable from 1.24V to 26V (MIC2941A)
- Available in TO-220-3, TO-263-3, TO-220-5, and TO-263-5 Packages

Applications

- Battery-Powered Equipment
- Cellular Telephones
- Laptop, Notebook, and Palmtop Computers
- PCMCIA V_{CC} and V_{PP} Regulation/Switching
- Barcode Scanners
- Automotive Electronics
- SMPS Post-Regulator/DC-to-DC Modules
- Voltage Reference
- High Efficiency Linear Power Supplies

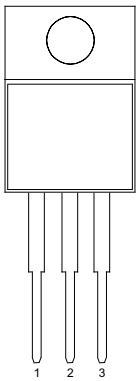

General Description

The MIC2940A and MIC2941A are “bulletproof” efficient voltage regulators with very low dropout voltage (typically 40 mV at light loads and 350 mV at 1A), and low quiescent current (240 µA typical). The quiescent current of the MIC2940A increases only slightly in dropout, thus prolonging battery life. Key MIC2940A features include protection against reversed battery, fold-back current-limiting, and automotive “load dump” protection (60V positive transient).

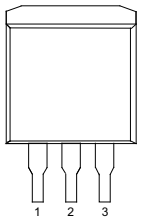

The MIC2940A is available in both fixed voltage (3.3V, 5V, and 12V) and adjustable voltage configurations. The MIC2940A-xx devices are three pin, fixed-voltage regulators. A logic-compatible shutdown input is provided on the adjustable MIC2941A, which enables the regulator to be switched on and off.

Typical Application Circuits

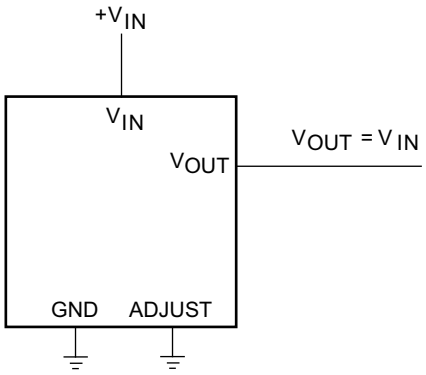

MIC2940A-5.0 FIXED +5V REGULATOR

MIC2941A ADJUSTABLE REGULATOR

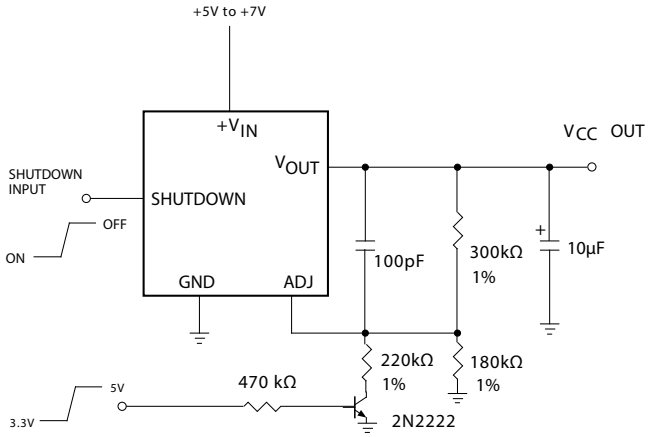

MIC2941A WIDE INPUT VOLTAGE RANGE CURRENT-LIMIT

MINIMUM INPUT-OUTPUT VOLTAGE RANGES FROM 40MV TO 400MV, DEPENDING ON LOAD CURRENT

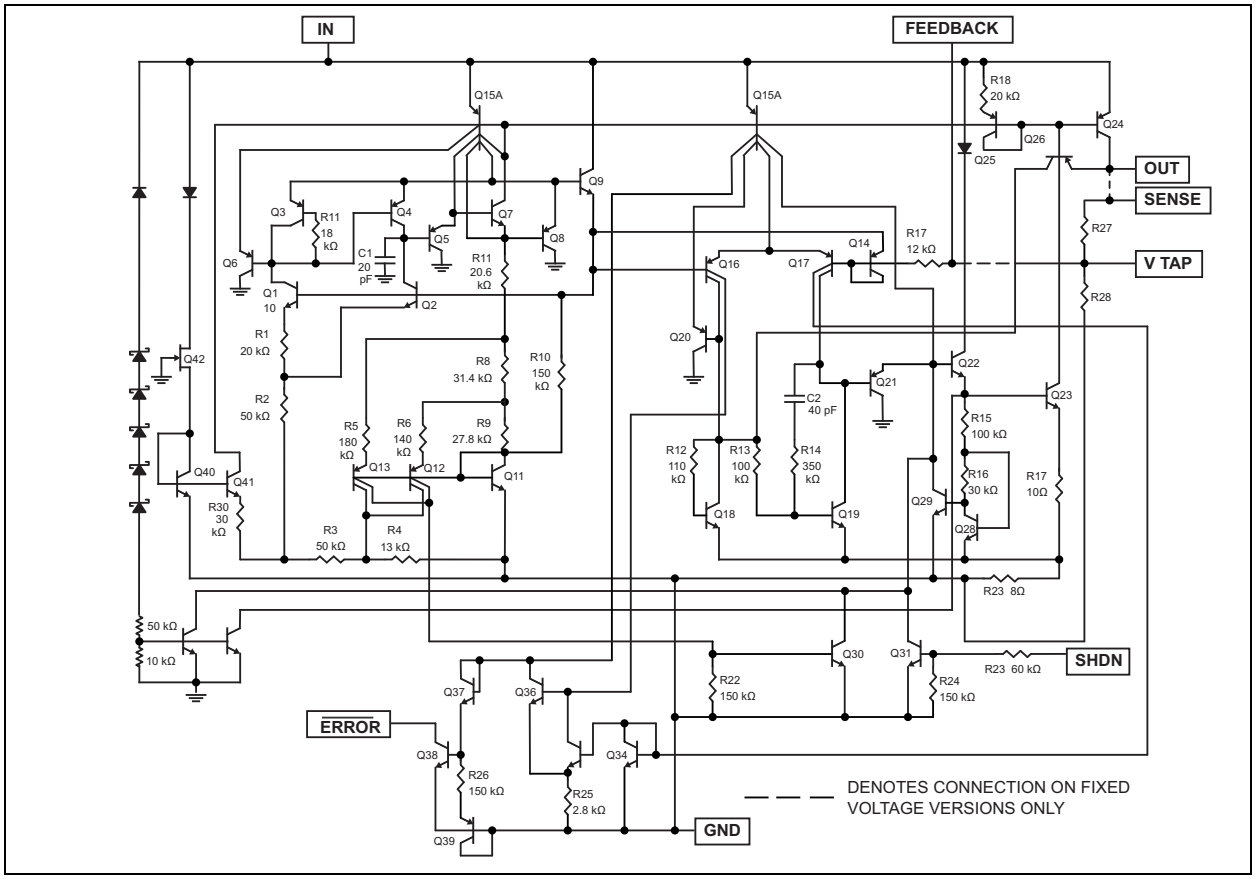

MIC2941A 5V OR 3.3V SELECTABLE REGULATOR WITH SHUTDOWN

Adjust Pin Low = Enable Output. Q1 ON = 3.3V, Q1 OFF = 5.0V.

Functional Block Diagram

1.0 ELECTRICAL CHARACTERISTICS

Absolute Maximum Ratings †

Power Dissipation (P_D)..... Internally Limited, Note 1
Input Supply Voltage ..... –20V to +60V
Adjust Input Voltage (Note 2, Note 3)..... –1.5V to +26V
Shutdown Input Voltage ..... –0.3V to +30V
Error Comparator Output Voltage..... –0.3V to +30V

Operating Ratings ‡

Input Supply Voltage (Note 4) ..... +2V to +26V

† Notice: Stresses above those listed under “Absolute Maximum Ratings” may cause permanent damage to the device. This is a stress rating only and functional operation of the device at those or any other conditions above those indicated in the operational sections of this specification is not intended. Exposure to maximum rating conditions for extended periods may affect device reliability.

‡ Notice: The device is not guaranteed to function outside its operating ratings.

Note 1: The maximum allowable power dissipation of any T_A (ambient temperature) is $P_{D(max)} = (T_{J(max)} - T_A)/\theta_{JA}$. Exceeding the maximum allowable power dissipation will result in excessive die temperature, and the regulator will go into thermal shutdown.

2: Circuit of MIC2941A Adjustable Regulator in the Typical Application Circuits section (upper right) with R1 ≥ 150 kΩ. $V_{SHUTDOWN} \geq 2V$ and $V_{IN} \leq 26V$, $V_{OUT} = 0$.

3: When used in dual supply systems where the regulator load is returned to a negative supply, the output voltage must be diode clamped to ground.

4: Across the full operating temperature, the minimum input voltage range for full output current is 4.3V to 26V. Output will remain in regulation at lower output voltages and low current loads down to an input of 2V at 25°C.

ELECTRICAL CHARACTERISTICS

Electrical Characteristics: Limits in standard typeface are for T_J = +25°C and limits in **boldface** apply over the full operating temperature range. Unless otherwise specified, $V_{IN} = V_{OUT} + 1V$, I_L = 1000 mA, C_L = 10 µF. The MIC2941A is programmed to output 5V and has $V_{SHUTDOWN}$ 0.6V.

ELECTRICAL CHARACTERISTICS (CONTINUED)

Electrical Characteristics: Limits in standard typeface are for T_J = +25°C and limits in **boldface** apply over the full operating temperature range. Unless otherwise specified, $V_{IN} = V_{OUT}$ + 1V, I_L = 1000 mA, C_L = 10 µF. The MIC2941A is programmed to output 5V and has $V_{SHUTDOWN}$ 0.6V.

Parameter	Symbol	Min.	Typ.	Max.	Units	Conditions
Shutdown Input						
Input Logic Voltage	V_{IL}	—	1.3	**0.7**	V	Low (ON)
	V_{IH}	**2.0**	—	—		High (OFF)
Shutdown Pin Input Current	I_{SHDN}	—	30	50	µA	$V_{SHUTDOWN}$ = 2.4V
		—	—	**100**		
		—	450	600		$V_{SHUTDOWN}$ = 26V
		—	—	**750**		
Regulator Output Current in Shutdown	$I_{OUT(SHDN)}$	—	3	30	µA	Note 8
		—	—	**60**		

Note 1: Output voltage temperature coefficient is defined as the worst case voltage change divided by the total temperature range.

2: Regulation is measured at constant junction temperature using low duty cycle pulse testing. Changes in output voltage due to heating effects are covered by the thermal regulation specification.

3: Dropout voltage is defined as the input to output differential at which the output voltage drops 100 mV below its nominal value measured at 1V differential. At low values of programmed output voltage, the minimum input supply voltage of 4.3V over temperature must be taken into account.

4: Ground pin current is the regulator quiescent current. The total current drawn from the source is the sum of the load current plus the ground pin current.

5: The MIC2940A features fold-back current limiting. The short-circuit (V_{OUT} = 0V) current-limit is less than the maximum current with normal output voltage.

6: Thermal regulation is defined as the change in output voltage at a time (T) after a change in power dissipation is applied, excluding load or line regulation effects. Specifications are for a 200 mA load pulse at V_{IN} = 20V (a 4W pulse) for T = 10 ms.

7: $V_{REF} \le V_{OUT} \le (V_{IN} - 1\ V)$, 4.3V ≤ V_{IN} 26V, 5 mA < $I_L \le$ 1.25A, $T_J \le T_{J(MAX)}$.

8: When used in dual supply systems where the regulator load is returned to a negative supply, the output voltage must be diode clamped to ground.

TEMPERATURE SPECIFICATIONS (Note 1)

Parameters	Sym.	Min.	Typ.	Max.	Units	Conditions
Temperature Ranges						
Storage Temperature Range	T_S	–65	—	+150	°C	—
Junction Operating Temperature Range	T_J	–40	—	+125	°C	—
Lead Temperature	—	—	—	+260	°C	Soldering, 5s
Package Thermal Resistances						
Thermal Resistance TO-220	θ_{JC}	—	2	—	°C/W	—
Thermal Resistance TO-263	θ_{JC}	—	2	—	°C/W	—

Note 1: The maximum allowable power dissipation is a function of ambient temperature, the maximum allowable junction temperature and the thermal resistance from junction to air (i.e., T_A, T_J, θ_{JA}). Exceeding the maximum allowable power dissipation will cause the device operating junction temperature to exceed the maximum +125°C rating. Sustained junction temperatures above +125°C can impact the device reliability.

4.0 APPLICATION INFORMATION

4.1 External Capacitors

A 10 µF (or greater) capacitor is required between the MIC2940A output and ground to prevent oscillations due to instability. Most types of tantalum or aluminum electrolytics will be adequate; film types will work, but are costly and therefore not recommended. Many aluminum electrolytics have electrolytes that freeze at about –30°C, so solid tantalums are recommended for operation below –25°C. The important parameters of the capacitor are an effective series resistance of about 5Ω or less and a resonant frequency above 500 kHz. The value of this capacitor may be increased without limit.

At lower values of output current, less output capacitance is required for output stability. The capacitor can be reduced to 3.3 µF for current below 100 mA or 2.2 µF for currents below 10 mA. Adjusting the MIC2941A to voltages below 5V runs the error amplifier at lower gains so that more output capacitance is needed. For the worst-case situation of a 1.25A load at 1.23V output (Output shorted to Adjust) a 22 µF (or greater) capacitor should be used.

The MIC2940A will remain stable and in regulation with load currents ranging from 5 mA on up to the full 1.25A rating. The external resistors of the MIC2941A version may be scaled to draw this minimum load current.

A 0.22 µF capacitor should be placed from the MIC2940A input to ground if there is more than 10 inches of wire between the input and the AC filter capacitor or if a battery is used as the input.

4.2 Programming the Output Voltage (MIC2941A)

The MIC2941A may be programmed for any output voltage between its 1.235V reference and its 26V maximum rating. An external pair of resistors is required, as shown in the MIC2941A Adjustable Regulator Typical Application Circuit.

EQUATION 4-1:

$$V_{OUT} = V_{REF} \times \left(1 + \frac{R1}{R2}\right) - \left|I_{FB}\right| \times R1$$

Where:
V_{REF} = The nominal 1.235V reference voltage.
I_{FB} = The adjust pin bias current (nom. 20 nA).

The minimum recommended load current of 1 µA forces an upper limit of 1.2 MΩ on the value of R2, if the regulator must work with no load (a condition often found in CMOS in standby), I_{FB} will produce a –2% typical error in V_{OUT} which may be eliminated at room temperature by trimming R1. For better accuracy, choosing R2 = 100 kΩ reduces this error to 0.17% while increasing the resistor program current to 12 µA. Because the MIC2941A typically draws 100 µA at no load with SHUTDOWN open-circuited, this is a negligible addition.

4.3 Reducing Output Noise

In reference applications, it may be advantageous to reduce the AC noise present at the output. One method is to reduce the regulator bandwidth by increasing the size of the output capacitor. This is relatively inefficient, as increasing the capacitor from 1 µF to 220 µF only decreases the noise from 430 µV to 160 μV_{RMS} for a 100 kHz bandwidth at 5V output. Noise can be reduced by a factor of four with the MIC2941A by adding a bypass capacitor across R1.

EQUATION 4-2:

$$C_{BYPASS} = \frac{1}{2\pi \times R1 \times 200Hz}$$

Pick a bypass capacitor of about 0.01 µF. When doing this, the output capacitor must be increased to 22 µF to maintain stability. These changes reduce the output noise from 430 µV to 100 μV_{RMS} for a 100 kHz bandwidth at 5V output. With the bypass capacitor added, noise no longer scales with output voltage so that improvements are more dramatic at higher output voltages.

4.4 Automotive Applications

The MIC2940A is ideally suited for automotive applications for a variety of reasons. It will operate over a wide range of input voltages with very low dropout voltages (40 mV at light loads), and very low quiescent currents (240 µA typical). These features are necessary for use in battery powered systems, such as automobiles. It is a “bulletproof” device with the ability to survive both reverse battery (negative transients up to 20V below ground), and load dump (positive transients up to 60V) conditions. A wide operating temperature range with low temperature coefficients is yet another reason to use these versatile regulators in automotive designs.

APPENDIX A: REVISION HISTORY

Revision A (April 2018)

- Converted Micrel document MIC2940A/41A to Microchip data sheet DS20006000A.
- Minor text changes throughout.
- Corrected bold values in Electrical Characteristics table.

Revision B (February 2022)

- Updated the Package Marking Information drawings with the most current marking information.

	U =	3-Lead TO-263 (MIC2940A) 5-Lead TO-263 (MIC2941A)
Media Type:	<blank>=	50/Tube
	TR =	750/Reel (TO-263 Package only)

* RoHS-compliant with “high-melting solder” exemption.

Examples:

a) MIC2940A-3.3WT: MIC2940A, 3.3V Output Voltage, –40°C to +125°C Temperature Range, 3-Lead TO-220, 50/Tube

b) MIC2940A-3.3WU-TR: MIC2940A, 3.3V Output Voltage, –40°C to +125°C Temperature Range, 3-Lead TO-263, 750/Reel

c) MIC2940A-5.0WU: MIC2940A, 5.0V Output Voltage, –40°C to +125°C Temperature Range, 3-Lead TO-263, 50/Tube

d) MIC2940A-12WT: MIC2940A, 12V Output Voltage, –40°C to +125°C Temperature Range, 3-Lead TO-220, 50/Tube

e) MIC2940A-12WU-TR: MIC2940A, 12V Output Voltage, –40°C to +125°C Temperature Range, 3-Lead TO-263, 750/Reel

f) MIC2941AWT: MIC2941A, Adjustable Output Voltage, –40°C to +125°C Temperature Range, 3-Lead TO-220, 50/Tube

g) MIC2941AWU: MIC2941A, Adjustable Output Voltage, –40°C to +125°C Temperature Range, 5-Lead TO-263, 50/Tube

h) MIC2941AWU-TR: MIC2941A, Adjustable Output Voltage, –40°C to +125°C Temperature Range, 5-Lead TO-263, 750/Reel

Note 1: Tape and Reel identifier only appears in the catalog part number description. This identifier is used for ordering purposes and is not printed on the device package. Check with your Microchip Sales Office for package availability with the Tape and Reel option.

NOTES:

© 2018 - 2022 Microchip Technology Inc. and its subsidiaries

Note the following details of the code protection feature on Microchip products:

- Microchip products meet the specifications contained in their particular Microchip Data Sheet.
- Microchip believes that its family of products is secure when used in the intended manner, within operating specifications, and under normal conditions.
- Microchip values and aggressively protects its intellectual property rights. Attempts to breach the code protection features of Microchip product is strictly prohibited and may violate the Digital Millennium Copyright Act.
- Neither Microchip nor any other semiconductor manufacturer can guarantee the security of its code. Code protection does not mean that we are guaranteeing the product is “unbreakable”. Code protection is constantly evolving. Microchip is committed to continuously improving the code protection features of our products.

This publication and the information herein may be used only with Microchip products, including to design, test, and integrate Microchip products with your application. Use of this information in any other manner violates these terms. Information regarding device applications is provided only for your convenience and may be superseded by updates. It is your responsibility to ensure that your application meets with your specifications. Contact your local Microchip sales office for additional support or, obtain additional support at https://www.microchip.com/en-us/support/design-help/client-support-services.

THIS INFORMATION IS PROVIDED BY MICROCHIP "AS IS". MICROCHIP MAKES NO REPRESENTATIONS OR WARRANTIES OF ANY KIND WHETHER EXPRESS OR IMPLIED, WRITTEN OR ORAL, STATUTORY OR OTHERWISE, RELATED TO THE INFORMATION INCLUDING BUT NOT LIMITED TO ANY IMPLIED WARRANTIES OF NON-INFRINGEMENT, MERCHANTABILITY, AND FITNESS FOR A PARTICULAR PURPOSE, OR WARRANTIES RELATED TO ITS CONDITION, QUALITY, OR PERFORMANCE.

IN NO EVENT WILL MICROCHIP BE LIABLE FOR ANY INDIRECT, SPECIAL, PUNITIVE, INCIDENTAL, OR CONSEQUENTIAL LOSS, DAMAGE, COST, OR EXPENSE OF ANY KIND WHATSOEVER RELATED TO THE INFORMATION OR ITS USE, HOWEVER CAUSED, EVEN IF MICROCHIP HAS BEEN ADVISED OF THE POSSIBILITY OR THE DAMAGES ARE FORESEEABLE. TO THE FULLEST EXTENT ALLOWED BY LAW, MICROCHIP'S TOTAL LIABILITY ON ALL CLAIMS IN ANY WAY RELATED TO THE INFORMATION OR ITS USE WILL NOT EXCEED THE AMOUNT OF FEES, IF ANY, THAT YOU HAVE PAID DIRECTLY TO MICROCHIP FOR THE INFORMATION.

Use of Microchip devices in life support and/or safety applications is entirely at the buyer's risk, and the buyer agrees to defend, indemnify and hold harmless Microchip from any and all damages, claims, suits, or expenses resulting from such use. No licenses are conveyed, implicitly or otherwise, under any Microchip intellectual property rights unless otherwise stated.

ENTEGRECİ

Bu belge www.entegreci.com üzerinden sunulmaktadır.

Elektronik komponent tedarikinde Entegreci

Entegreci, Eskişehir merkezli, Türkiye geneline satış yapan bir elektronik komponent mağazasıdır. Entegreler (IC), mikrodenetleyiciler, transistörler, diyotlar, pasif elemanlar, konnektörler, modüller ve geliştirme kartları tek adetten seri üretim adetlerine kadar satılır. Ürün sayfalarında güncel stok durumunu, fiyatı ve datasheet bağlantısını bulabilirsiniz.

Parça koduyla arama

Üretici parça numarasını yazın; stok ve fiyatı hemen görün.
