LDO Regulator - Very Low Dropout, CMOS, Bias Rail

700 mA

NCP137

The NCP137 is a 700 mA VLDO equipped with NMOS pass transistor and a separate bias supply voltage (V_{BIAS}). The device provides very stable, accurate output voltage with low noise suitable for space constrained, noise sensitive applications. In order to optimize performance for battery operated portable applications, the NCP137 features low I_Q consumption. The WLCSP6 1.2 mm x 0.8 mm Chip Scale package is optimized for use in space constrained applications.

Features

- Input Voltage Range: V_{OUT} to 5.5 V
- Bias Voltage Range: 2.5 V to 5.5 V
- Adjustable and Fixed Voltage Version Available
- Output Voltage Range: 0.4 V to 1.8 V (Fixed) and 0.5 V to 3.0 V (Adjustable)
- ±1% Accuracy over Temperature, 0.5% V_{OUT} @ 25 °C
- Ultra-Low Dropout: Typ. 40 mV at 700 mA
- Very Low Bias Input Current of Typ. 35 μA
- Very Low Bias Input Current in Disable Mode: Typ. 0.5 μA
- Logic Level Enable Input for ON/OFF Control
- Output Active Discharge Option Available
- Stable with a 4.7 μF Ceramic Capacitor
- Available in WLCSP6-1.2 mm x 0.8 mm, 0.4 mm pitch Package
- These Devices are Pb-Free, Halogen Free/BFR Free and are RoHS Compliant

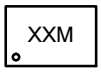

Typical Applications

- Battery-powered Equipment
- Smartphones, Tablets
- Cameras, DVRs, STB and Camcorders

PIN FUNCTION DESCRIPTION

Pin No. WLCSP6	Pin Name	Description
A1	VOUT	Regulated Output Voltage pin
A2	VIN	Input Voltage Supply pin
B1 (ADJ devices)	FB	Adjustable Regulator Feedback Input. Connect to output voltage resistor divider central node.
B1 (Fix Volt devices)	SNS	Output voltage Sensing Input. Connect to Output on the PCB to output the voltage corresponding to the part version.
B2	EN	Enable pin. Driving this pin high enables the regulator. Driving this pin low puts the regulator into shutdown mode.
C1	GND	Ground pin
C2	VBIAS	Bias voltage supply for internal control circuits. This pin is monitored by internal Under-Voltage Lockout Circuit.

APPLICATIONS INFORMATION

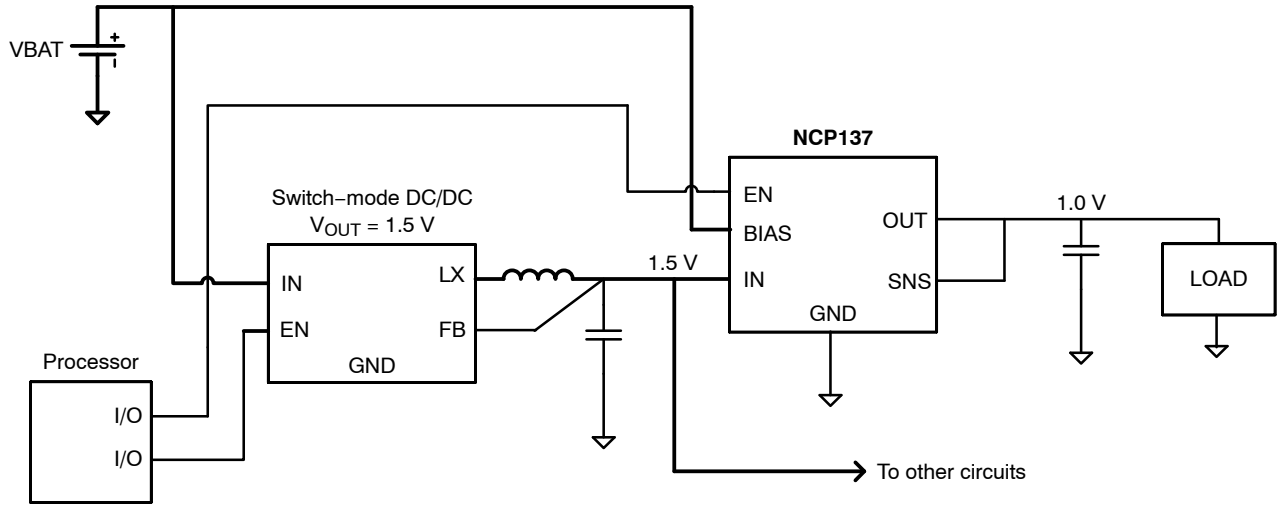

Figure 4. Typical Application: Low−Voltage DC/DC Post−Regulator with ON/OFF Functionality

The NCP137 dual-rail very low dropout voltage regulator is using NMOS pass transistor for output voltage regulation from V_{IN} voltage. All the low current internal control circuitry is powered from the V_{BIAS} voltage.

The use of an NMOS pass transistor offers several advantages in applications. Unlike PMOS topology devices, the output capacitor has reduced impact on loop stability. Vin to Vout operating voltage difference can be very low compared with standard PMOS regulators in very low Vin applications.

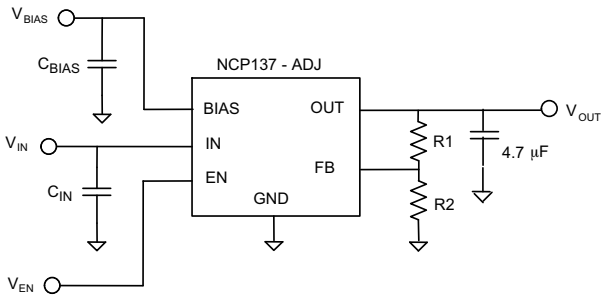

The NCP137 offers smooth monotonic start-up. The controlled voltage rising limits the inrush current.

The Enable (EN) input is equipped with internal hysteresis. NCP137 Voltage linear regulator Fixed and Adjustable version is available.

Output Voltage Adjust

The required output voltage of Adjustable devices can be adjusted from 0.5 V to 3.0 V using two external resistors.

Typical application schematics is shown in Figure 5.

$$V_{OUT} = 0.5\ V \times (1 + R1/R2)$$

Figure 5. Typical Application Schematics

It is recommended to keep the total serial resistance of resistors (R1 + R2) no greater than 100 kΩ.

Dropout Voltage

Because of two power supply inputs V_{IN} and V_{BIAS} and one V_{OUT} regulator output, there are two Dropout voltages specified.

The first, the V_{IN} Dropout voltage is the voltage difference (V_{IN}-V_{OUT}) when V_{OUT} starts to decrease by percent specified in the Electrical Characteristics table. V_{BIAS} is high enough; specific value is published in the Electrical Characteristics table.

The second, V_{BIAS} dropout voltage is the voltage difference (V_{BIAS}-V_{OUT}) when V_{IN} and V_{BIAS} pins are joined together and V_{OUT} starts to decrease.

Input and Output Capacitors

The Adjustable device is designed to be stable for ceramic output capacitors with Effective capacitance in the range from 4.7 μF to 22 μF. The device is also stable with multiple capacitors in parallel, having the total effective capacitance in the specified range. For ADJ applications with nominal output voltage less than 0.6 V and for all the fixed voltage devices applications the output capacitor effective capacitance 10 μF to 22 μF is recommended.

In applications where no low input supplies impedance available (PCB inductance in V_{IN} and/or V_{BIAS} inputs as example), the recommended C_{IN} = 1 μF and C_{BIAS} = 0.1 μF or greater. Ceramic capacitors are recommended**.** For the best performance all the capacitors should be connected to the NCP137 respective pins directly in the device PCB copper layer, not through vias having not negligible impedance.

When using small ceramic capacitor, their capacitance is not constant but varies with applied DC biasing voltage, temperature and tolerance. The effective capacitance can be much lower than their nominal capacitance value, most importantly in negative temperatures and higher LDO output voltages. That is why the recommended Output capacitor capacitance value is specified as Effective value in the specific application conditions.

Enable Operation

The enable pin will turn the regulator on or off. The threshold limits are covered in the electrical characteristics table in this data sheet. If the enable function is not to be used then the pin should be connected to V_{IN} or V_{BIAS}.

Current Limitation

The internal Current Limitation circuitry allows the device to supply the full nominal current and surges but protects the device against Current Overload or Short.

Thermal Protection

Internal thermal shutdown (TSD) circuitry is provided to protect the integrated circuit in the event that the maximum junction temperature is exceeded. When TSD activated , the regulator output turns off. When cooling down under the low temperature threshold, device output is activated again. This TSD feature is provided to prevent failures from accidental overheating.

Activation of the thermal protection circuit indicates excessive power dissipation or inadequate heatsinking. For reliable operation, junction temperature should be limited to +105 °C maximum.
